INTERNATIONAL October Conference on Mining and Metallurgy (55 ; 2024 ; Kladovo)

Proceedings / 55th International October Conference on Mining and Metallurgy – IOC 2024, 15 – 17 October 2024, Kladovo, Serbia ; [organizers] Mining and Metallurgy Institute Bor [and] University of Belgrade, Technical Faculty in Bor ; editor Ana Kostov. - Bor : Mining and Metallurgy Institute, 2024 (Bor : Grafomed-trade). - XXI, 468 str. : ilustr. ; 24 cm

Tiraž 150. - Bibliografija uz svaki rad. - Registar.

ISBN 978-86-7827-053-6

a) Рударство -- Зборници b) Металургија -- Зборници

COBISS.SR-ID 153297161

Kladovo, 15 – 17 October 2024

Conference is financially supported by the
Ministry of Science, Technological Development and
Innovation of the Republic of Serbia,
Contract No. 451-03-4405/2024-03 from 08.07.2024.

SCIENTIFIC COMMITTEE

55th International October Conference on Mining and Metallurgy

Dr Mile Bugarin, Mining and Metallurgy Institute Bor (*Serbia*) – *President*
Dr Ana Kostov, Mining and Metallurgy Institute Bor (*Serbia*) – *Vice President*

Australia

Dr Walter Valery, University of Queensland, Sustainable Minerals Institute, Brisbane

Bulgaria

Prof. Dr Boyan Boyanov, University of Plovdiv, Plovdiv
Prof. Dr Daniela Grigorova, University of Chemical Technology and Metallurgy,
Department of Metallurgical Technologies, Electrotechnics and Electronics, Sofia
Prof. Dr Rositsa Paunova, University of Chemical Technology and Metallurgy, Department
of Ferrous Metallurgy and Metal Casting, Sofia
Prof. Dr Stoyan Groudev, University of Mining and Geology, Department of Engineering
Geoecology, Sofia

Bosnia and Herzegovina

Dr Boško Vuković, University of Banja Luka, Faculty of Mining, Banja Luka, Republic of Srpska
Prof. Dr Farzet Bikić, University of Zenica, Faculty of Engineering and Natural Sciences, Zenica
Prof. Dr Jasmin Suljagić, University of Tuzla, Faculty of Technology, Tuzla
Prof. Dr Kemal Gutić, University of Tuzla, Faculty of Mining, Geology and Civil Engineering,
Tuzla
Prof. Dr Sead Čatić, University of Tuzla, Faculty of Technology, Tuzla

Canada

Dr Dragan Komljenović, Research Institute, Hydro-Québec, Brossard
Prof. Dr Vladimir Krstić, Queen's University, Faculty Engineering and Applied Science,
Kingston, Ontario
Dr Zoran Janković, Process research Ortech, Toronto, Ontario

China

Prof. Dr Kaikun Wang, University of Science and Technology Beijing, School of Materials
Science and Engineering, Beijing
Prof. Dr Yong Du, Central South University Changsha, Hunan
Dr Zhongmei Sun, Zijin Mining and Metallurgy Design and Research Institute, Xiamen City
Prof. Dr Xuewei Lv, Chongqing University, College of Materials Science and Engineering,
Shapingba, Chongqing

Croatia

Prof. Dr Mirko Gojić, University of Zagreb, Faculty of Metallurgy, Sisak
Prof. Dr Natalija Dolić, University of Zagreb, Faculty of Metallurgy, Sisak
Prof. Dr Tamara Holjevac Grgurić, University of Zagreb, Faculty of Metallurgy, Sisak
Prof. Dr Zdenka Zovko Brodarac, University of Zagreb, Faculty of Metallurgy, Sisak

Germany

Prof. Dr Karl-Heinz Spitzer, Technical University of Clausthal, Institute for Metallurgy, Clausthal
Dr Srećko Stopić, RWTH Aachen University, Faculty of Georesources and Materials
Engineering, Aachen

Greece

Prof. Dr Dimitris Panias, National Technical University of Athens, School of Mining and Metallurgy Engineering, Athens

Prof. Dr Komnitsas Konstantinos, Technical University of Crete, School of Mineral Resources Engineering, Chania

Hungary

Prof. Dr György Kaptay, University of Miskolc, Department of Nanotechnology, Miskolc

India

Prof. Dr Nikhil Dhawan, Indian Institute of Technology, Department of Metallurgical and Materials Engineering, IIT-Roorkee

Japan

Prof. Dr Nobuyuki Masuda, Tokyo University of Science, Faculty of Advanced Engineering, Tokyo

Kazakhstan

Dr Rustam Sharipov, Kazakh-British Technical University, Almaty

Montenegro

Prof. Dr Kemal Delijić, University of Montenegro, Faculty of Metallurgy and Technology, Podgorica

Prof. Dr Nebojša Tadić, University of Montenegro, Faculty of Metallurgy and Technology Podgorica,

Prof. Dr Žarko Radović, University of Montenegro, Faculty of Metallurgy and Technology Podgorica

North Macedonia

Prof. Dr Aleksandar Dimitrov, Ss. Cyril and Methodius University in Skopje, Faculty of Technology and Metallurgy, Skopje

Poland

Prof. Dr Adam Grajcar, Silesian University of Technology, Faculty of Mechanical Engineering, Gliwice

Prof. Dr Krzysztof Fitzner, AGH University of Science and Technology in Kraków, Department of Physical Chemistry and Metallurgy of Non-Ferrous Metals, Kraków

Romania

Prof. Dr Adina Negrea, Politehnica University of Timisoara, Faculty of Industrial Chemistry and Environmental Engineering, Timisoara

Prof. Dr Andrei Rotaru, Institute of Physical Chemistry “Ilie Murgulescu”, Romanian Academy, Bucharest

Prof. Dr Cornelia Muntean, Politehnica University of Timisoara, Faculty of Industrial Chemistry and Environmental Engineering, Timisoara

Prof. Dr Corneliu Crăciunescu, Politehnica University of Timisoara, Faculty of Mechanical Engineering, Timisoara

Prof. Dr Elena Scutelnicu, "Dunarea de Jos" University of Galati, Faculty of Engineering, Galați

Prof. Dr Nicanor Cimpoeșu, Gheorghe Asachi Technical University of Iasi, Faculty of Materials Science and Engineering, Iași

Prof. Dr Petrica Vizureanu, Gheorghe Asachi Technical University of Iasi, Faculty of Materials Science and Engineering, Iași

Russia

Prof. Dr Sergey Krasikov, Institute of Metallurgy of Ural Branch of the Russian Academy of Sciences, Yekaterinburg

Prof. Dr Tatiana N. Aleksandrova, Saint Petersburg Mining University, Department of Mineral Processing, Saint Petersburg

Slovakia

Prof. Dr Dušan Oráč, Technical University of Kosice, Faculty of Materials, Metallurgy and Recycling, Institute of Recycling Technologies, Košice

Prof. Dr Iveta Vasková, Technical University of Kosice, Faculty of Materials, Metallurgy and Recycling, Košice

Dr Slavomír Hredzák, Institute of Geotechnics of the Slovak Academy of Sciences, Košice

Slovenia

Prof. Dr Boštjan Markoli, University of Ljubljana, Faculty of Natural Science and Engineering, Ljubljana

Prof. Dr Jožef Medved, University of Ljubljana, Faculty of Natural Science and Engineering, Ljubljana

South Africa

Prof. Dr Daniel Ogochukwu Okanigbe, Tshwane University of Technology, Department of Extractive Metallurgy and Mineral Processing, Johannesburg

Turkey

Prof. Dr Onuralp Yücel, Istanbul Technical University, Faculty of Metallurgical Engineering, Istanbul

Prof. Dr Ridvan Yamanoglu, Kocaeli University, Faculty of Engineering, Metallurgical and Materials Engineering, Kocaeli

USA

Prof. Emeritus Batrić Pešić, University of Idaho, College of Engineering, Moscow

Prof. Dr Vladislav Kecojević, West Virginia University, College of Engineering and Mineral Resources, Morgantown

Serbia

Dr Aleksandra Ivanović, Mining and Metallurgy Institute Bor

Dr Aleksandra Milosavljević, Mining and Metallurgy Institute Bor

Dr Biserka Trumić, Mining and Metallurgy Institute Bor

Dr Branislav Marković, Institute for Technology of Nuclear and other Mineral Raw Materials Belgrade

Prof. Dr Branislav Nikolić, Engineering Academy of Serbia

Prof. Dr Časlav Lačnjevac, Engineering Academy of Serbia

Dr Daniel Kržanović, Mining and Metallurgy Institute Bor

Dr Daniela Urošević, Mining and Metallurgy Institute Bor

Dr Dejan Bugarin, Mining and Metallurgy Institute Bor

Prof. Dr Dejan Ivezić, University of Belgrade, Faculty of Mining and Geology Belgrade

Prof. Dr Dejan Tanikić, University of Belgrade, Technical Faculty Bor

Prof. Dr Dragan Manasijević, University of Belgrade, Technical Faculty Bor

Dr Dragan Milanović, Mining and Metallurgy Institute Bor

Prof. Dr Dragan Milovanović, University of Belgrade, Faculty of Mining and Geology Belgrade

Dr Dragana Adamović, Mining and Metallurgy Institute Bor

Dr Dragana Božić, Mining and Metallurgy Institute Bor

Prof. Dr Dragoslav Rakić, University of Belgrade, Faculty of Mining and Geology Belgrade

Prof. Dr Duško Minić, University of Priština, Faculty of Technical Sciences Kosovska Mitrovica

Prof. Dr Grozdanka Bogdanović, University of Belgrade, Technical Faculty Bor
Dr Emina Požega, Mining and Metallurgy Institute Bor
Prof. Dr Ivan Mihajlović, University of Belgrade, Faculty of Mechanical Engineering Belgrade
Dr Ivana Jovanović, Mining and Metallurgy Institute Bor
Dr Jasmina Stevanović, University of Belgrade, Institute of Chemistry, Technology and Metallurgy Belgrade
Dr Jasna Stajić Trošić, University of Belgrade, Institute of Chemistry, Technology and Metallurgy Belgrade
Dr Jelena Petrović, Mining and Metallurgy Institute Bor
Dr Ljiljana Avramović, Mining and Metallurgy Institute Bor
Prof. Dr Nada Štrbac, University of Belgrade, Technical Faculty Bor
Dr Milan Radivojević, Mining and Metallurgy Institute Bor
Prof. Dr Milan Trumić, University of Belgrade, Technical Faculty Bor
Dr Milenko Ljubojev, Engineering Academy of Serbia
Prof. Dr Miloš Rajković, Engineering Academy of Serbia
Prof. Dr Milovan Vuković, University of Belgrade, Technical Faculty Bor
Prof. Dr Miomir Pavlović, Engineering Academy of Serbia
Dr Mirjana Stojanović, Engineering Academy of Serbia
Dr Miroslav Sokić, Institute for Technology of Nuclear and other Mineral Raw Materials Belgrade
Dr Nadežda Talijan, Academy of Engineering Science of Serbia
Prof. Dr Nedeljko Magdalinović, Engineering Academy of Serbia
Prof. Dr Nenad Vušović, University of Belgrade, Technical Faculty Bor
Prof. Dr Rade Jelenković, University of Belgrade, Faculty of Mining and Geology Belgrade
Dr Radmila Marković, Mining and Metallurgy Institute Bor
Prof. Dr Radoje Pantović, University of Belgrade, Technical Faculty Bor
Dr Renata Kovačević, Mining and Metallurgy Institute Bor
Dr Sanja Petrović, Mining and Metallurgy Institute Bor
Dr Silvana Dimitrijević, Mining and Metallurgy Institute Bor
Dr Slavica Miletić, Mining and Metallurgy Institute Bor
Prof. Dr Snežana Milić, University of Belgrade, Technical Faculty Bor
Prof. Dr Snežana Šerbula, University of Belgrade, Technical Faculty Bor
Dr Stefan Đorđievski, Mining and Metallurgy Institute Bor
Prof. Dr Tatjana Volkov-Husović, University of Belgrade, Faculty of Technology and Metallurgy Belgrade
Dr Vaso Manojlović, University of Belgrade, Faculty of Technology and Metallurgy Belgrade
Dr Vesna Conić, Mining and Metallurgy Institute Bor
Dr Vesna Krstić, Mining and Metallurgy Institute Bor
Dr Vesna Marjanović, Mining and Metallurgy Institute Bor
Dr Viša Tasić, Mining and Metallurgy Institute Bor
Dr Vladan Čosović, University of Belgrade, Institute of Chemistry, Technology and Metallurgy Belgrade
Dr Vojislav Bogdanović, Engineering Academy of Serbia
Dr Zoran Stevanović, Mining and Metallurgy Institute Bor
Prof. Dr Željko Kamberović, University of Belgrade, Faculty of Technology and Metallurgy Belgrade

ORGANIZING COMMITTEE

55th International October Conference on Mining and Metallurgy

Dr Ana Kostov, Mining and Metallurgy Institute Bor – *President*

Prof. Dr Milan Radovanović, University of Belgrade, Technical Faculty in Bor – *Vice President*

Dr Dragana Božić, Mining and Metallurgy Institute Bor – *Vice President*

Suzana Cvetković, Mining and Metallurgy Institute Bor – *secretary*

Dr Aleksandra Milosavljević, Mining and Metallurgy Institute Bor – *member*

Dr Vesna Marjanović, Mining and Metallurgy Institute Bor – *member*

Dr Marijana Pavlov Kagadejev, Mining and Metallurgy Institute Bor – *member*

Nevenka Vukašinović, Mining and Metallurgy Institute Bor – *member*

Vesna Simić, Mining and Metallurgy Institute Bor – *member*

Saša Stojanov, Mining and Metallurgy Institute Bor – *member*

EDITORIAL BOARD

55th International October Conference on Mining and Metallurgy

Dr Ana Kostov, Mining and Metallurgy Institute Bor – *Editor in Chief*

Dr Aleksandra Milosavljević, Mining and Metallurgy Institute Bor – *Co-Editor*

Dr Vesna Marjanović, Mining and Metallurgy Institute Bor – *Co-Editor*

Dr Marijana Pavlov Kagadejev, Mining and Metallurgy Institute Bor – *Co-Editor*

Nevenka Vukašinović, Mining and Metallurgy Institute Bor – *Technical Editor*

Vesna Simić, Mining and Metallurgy Institute Bor – *Technical Co-Editor*

Abstract

Development of various types the so-called "environmentally friendly" solders has been extensively investigated worldwide as an alternative to the lead-based solders. This study investigated the impact of graphene nanoparticles on microstructure and thermal properties of the lead-free solders. The nanocomposite solders were produced using the powder metallurgy method. The graphene nanoparticles were used as the reinforcement in the form of graphene nanosheets (GNS). The microstructural analysis showed that the GNS particles were homogeneously distributed along the grain boundaries, resulting in a refined β -Sn structure. At room temperature, density was measured using the Archimedes method, while the thermal diffusivity was determined using the flash method. The thermal conductivity of the Sn-0.7Cu nanocomposite solders was calculated using a fundamental equation. Increasing the GNS content up to 0.08 wt% in the Sn-0.7Cu solder matrix led to a slight decrease in density of the nanocomposite solders compared to the base solder, while the highest thermal conductivity was achieved with a 0.05 wt% GNS addition, reaching $44.74 \text{ W m}^{-1} \text{ K}^{-1}$.

Keywords: lead-free solder alloys, powder metallurgy, graphene nanosheets

1. INTRODUCTION

Microjoining of the engineered materials is one of the most important areas in the manufacturing and industrial sectors. Thanks to their excellent mechanical properties and outstanding electrical and thermal conductivity, the solder materials play an important role in achieving a reliable solder joint. The Sn-Pb solders have been popular for many years in the microelectronic applications [1]. Due to the presence of toxic lead in these solders, which poses a risk to the human health and environment, it is necessary to eliminate lead from the solder alloys. Several countries have started implementing the safety measures, including setting regulations to restrict or prohibit the use of lead in electronics. The European Union (EU) adopted two directives: WEEE (Waste Electrical and Electronic Equipment) and RoHS (Restriction of the Use of Certain Hazardous Substances) [2, 3].

Development of the lead-free solder alloys has been a major challenge for many researchers. Today, the most commonly used solders are from the Sn-Cu, Sn-Ag, and Sn-Ag-Cu systems. These solder alloys are also used as a matrix to obtain the composite solder materials [4]. Composite solder materials are the reinforced solder alloys. The powder metallurgy (PM) technique is the most commonly employed method for

producing the nanocomposite solders. Various reinforcing particles can be added, such as SiC, Al₂O₃, TiO₂, ZrO₂, SnO₂, ZnO, Si₃N₄, and TiB₂, to improve the properties of composite solder materials. Certain researchers use the nanomaterials as reinforcement, based on various allotropic forms of carbon. Graphite is the first known allotropic modification of carbon. It has a layered structure, where one layer represents a modification known as graphene. Graphene is the first natural two-dimensional (2D) atomic crystal with a thickness of one atom. It is the strongest and thinnest two-dimensional material studied, due to its dense network of the sp² bonding. It has remarkable thermal properties and thermal conductivity which is twenty times higher than copper at room temperature [5]. The graphene nanosheets (GNSs) are most frequently used for production the nanomaterials. They represent a one-dimensional (1D) nanomaterial created by etching or shaping graphene in one direction [6]. The addition of reinforcement particles such as the graphene nanosheets (GNS), single-walled carbon nanotubes (SWCNTs), multi-walled carbon nanotubes (MWCNTs), and fullerenes (FNs), is another area of interest [7].

The unique structural, electrical, optical, and magnetic properties of these materials have attracted the attention of many researchers [8]. Liu et al. observed that adding the GNS particles into the Sn-Ag-Cu solders reduced the grain growth, resulting in a finer microstructure [9]. Wang and colleagues concluded that adding the reinforcement particles of less than 0.5 wt% to the Sn-based solder alloys effectively refines the intermetallic compounds, thereby improving the performance of solder alloys [10]. Sun et al. determined that introducing the GNS into the Sn-0.7Cu solder matrix enhances the thermal conductivity, with the maximum improvement occurring in the GNS content of 0.16 wt% [11]. Huang and his colleagues used the PM method to produce the SAC305-0.1% GNS composite solders and found that adding the graphene nanoparticles efficiently inhibits the formation of intermetallic compound (IMC) layers. The GNS particles act as a diffusion barrier between copper and tin atoms, restricting their diffusion and limiting development of the IMC [12].

The main focus of this research is to understand how small additions of the GNS particles affect the microstructure and thermal properties of the nanocomposite solders. In this study, the graphene-reinforced composite solders were produced using the PM technique. The obtained results for the nanocomposite solders were compared with those of the base Sn-0.7Cu solder.

2. EXPERIMENTAL

Powders of two metals, Sn (99.90%) and Cu (99.96%), with particle sizes ranging from 25 to 45 μm, along with the GNS particles (average diameter 3-6 μm, thickness 3-5 nm), were utilized to obtain the Sn-0.7Cu-xGNS composite solders. Using the PM technique, the nanocomposite solders were synthesized with different contents of the GNS particles (0%, 0.02%, 0.05%, and 0.08%) in a Sn-0.7Cu solder matrix. Initially, the Sn powder was alloyed with Cu powder to create the Sn-0.7Cu base solder powder. The GNS reinforcement particles were added to the base solder powder and stirred for 30 hours. The composite powder was compacted under a pressure of 300 MPa, and the obtained green compacts were sintered in a furnace at 180°C for 3 hours in an argon atmosphere.

The microstructural changes in the sintered nanocomposite solders were studied using the metallographically prepared, polished, and etched samples to identify and analyze the morphological characteristics of grains, pores, and intermetallic compounds. Microstructure analysis was performed with the optical microscope 'Reichert MeF2' at 1000x magnification. The etchant solution was prepared mixing 2 vol.% HCl, 3 vol.% HNO₃, and 95 vol.% methanol.

The thermal diffusivity of the nanocomposite solders was measured at room temperature using the Discovery Xenon Flash (DXF-500) device, while the density was determined using the Archimedes method. Samples were shaped into round discs with a diameter of 12.6 mm and thickness of 2.5 mm. Measurements were conducted in an inert protective atmosphere. The thermal conductivity of the analyzed sample was calculated using the following fundamental equation (2):

$$\lambda = \alpha \times \rho \times C_p \quad (2)$$

where λ is thermal conductivity ($\text{Wm}^{-1}\text{K}^{-1}$), α is thermal diffusivity (m^2s^{-1}), ρ is density (gcm^{-3}) and C_p is specific heat capacity ($\text{Jg}^{-1}\text{K}^{-1}$).

3. RESULTS AND DISCUSSION

Figure 1 shows the microstructures of the Sn-0.7Cu-xGNS nanocomposite solders. During the sintering process, the minimal diffusion on the particle surfaces was observed. This diffusion was sufficient for compacting the powders but was not intense enough to cause the formation of eutectic phase, as also confirmed in the study by Huang et al [12].

Figure 1. OM microphotographs of the solder alloys at 1000x magnification; (a) Sn-0.7Cu; (b) Sn-0.7Cu-0.02% GNS; (c) Sn-0.7Cu-0.05% GNS; (d) Sn-0.7Cu-0.08% GNS

The microstructure of the base Sn-0.7Cu solder is shown in Figure 1a. All other microphotographs present the microstructures of solders containing the GNS particles. At an addition of 0.02 wt% GNS (Figure 1b), the presence of GNS particles in the nanocomposite solder is barely noticeable. However, with higher additions of 0.05 wt% GNS (Figure 1c) and 0.08 wt% GNS (Figure 1d), their presence becomes more evident. The reinforced GNS particles are distributed along the grain boundaries, and pores are visible in the microstructures. In the study by Yang et al., it was observed that as the weight content of the GNS particles exceeds 0.08 %, these reinforcement particles tend to agglomerate along the grain boundaries [13].

Based on the OM results, it can be concluded that an increase in the weight content of GNS particles leads to a grain refinement due to the uniform distribution of

reinforcement particles along the grain boundaries. The microstructure of the composite solders is more uniform and finer-grained than the base Sn-0.7Cu solder. Based on this observation, it can be assumed that the GNS particles act as the centers of heterogeneous nucleation, leading to the grain refinement. Furthermore, a higher GNS content increases the barrier effect, which inhibits the grain growth.

The graphene nanoparticles have a thermal conductivity of $5000 \text{ Wm}^{-1}\text{K}^{-1}$ [14], while the base Sn-0.7Cu solder alloy has a significantly lower value of $53 \text{ Wm}^{-1}\text{K}^{-1}$ [15]. Therefore, it can be assumed that adding the GNS particles would enhance the thermal conductivity. However, in composite materials, the situation is not that straightforward. The geometric orientation of the reinforcement in the matrix affects the value of the specific thermal conductivity. When the reinforced particles are oriented parallel to a direction of the heat flow, the thermal conductivity typically improves [16].

Figure 2 shows the thermal conductivity of the Sn-0.7Cu-xGNS nanocomposite solders. The results indicate that adding the reinforcement particles enhances the thermal conductivity of the nanocomposite solders.

Figure 2. Thermal conductivity of the Sn-0.7Cu-xGNSs nanocomposite solders

The base Sn-0.7Cu solder has a thermal conductivity of $39.11 \text{ Wm}^{-1}\text{K}^{-1}$, while the solder with 0.05 wt% GNS has the highest thermal conductivity value of $44.74 \text{ Wm}^{-1}\text{K}^{-1}$. When the GNS content in the nanocomposite solder reaches 0.08 wt%, the thermal conductivity decreases to $40.41 \text{ Wm}^{-1}\text{K}^{-1}$. It is assumed that a decrease in thermal conductivity is due to the agglomeration of the GNS particles along the grain boundaries, which causes the accumulation of dislocations and distorts the matrix lattice. This increases the probability of electron scattering, reduces the number of effective electrons in crystal, increases the resistance, and decreases the thermal conductivity.

4. CONCLUSION

In this study, the Sn-0.7Cu solders with different contents of the GNS reinforcement particles were successfully synthesized using the powder metallurgy technique. The following conclusions have been drawn:

- The microstructure analysis showed that the nanocomposite solders possess a more homogeneous and finer-grained microstructure than the base Sn-0.7Cu solder alloy. As the weight content of the GNS particles increases, the grain refinement occurs due to the barrier effect of the reinforcement particles, which inhibits a grain growth.
- The thermal conductivity of the nanocomposite solders improves with the addition of GNS particles, reaching its highest value at the GNS content of 0.05 wt%. Changes in density compared to the base Sn-0.7Cu solder are minimal due to the small weight percentages of the reinforcement.

ACKNOWLEDGEMENTS

The research presented in this paper was done with the financial support of the Ministry of Science, Technological Development and Innovation of the Republic of Serbia, with the funding of the scientific research work at the University of Belgrade, Technical Faculty in Bor, according to the Contract No. 451-03-65/2024-03/200131.
