SCIENTIFIC COMMITTEE

Prof. Dr Dejan Tanikić, University of Belgrade, Technical Faculty in Bor (Serbia) - president
Prof. Dr Nada Štrbac, University of Belgrade, Technical Faculty in Bor (Serbia) - vice-president
Prof. Dr Radoje Pantović, University of Belgrade, Technical Faculty in Bor (Serbia) - vice-president
Dr Ana Kostov, Mining and Metallurgy Institute Bor (Serbia) - vice-president

Prof. Dr Milan Antonijević, University of Belgrade, Technical Faculty in Bor (Serbia)
Prof. Dr Hasan Avdušinović, University of Zenica, Faculty of Engineering and Natural Sciences (Bosnia and Herzegovina)
Dr Ana Alil, University of Belgrade, Institute of Chemistry, Technology and Metallurgy (Serbia)
Prof. Dr Ljubiša Balanović, University of Belgrade, Technical Faculty in Bor (Serbia)
Prof. Dr Farzet Bikić, University of Zenica, Faculty of Engineering and Natural Sciences (Bosnia and Herzegovina)
Prof. Dr Grozdanka Bogdanović, University of Belgrade, Technical Faculty in Bor (Serbia)
Prof. Dr Pavel Broz, Masaryk University, Faculty of Science, Department of Chemistry (Czech Republic)
Dr Mile Bugarin, Mining and Metallurgy Institute Bor (Serbia)
Prof. Dr Ilhan Bušatlić, University of Zenica, Faculty of Engineering and Natural Sciences (Bosnia and Herzegovina)
Prof. Dr Nicanor Cimpoesu, Gheorghe Asachi Technical University from Iasi (Romania)
Prof. Dr Mira Cocić, University of Belgrade, Technical Faculty in Bor (Serbia)
Dr Vladan Čosović, University of Belgrade, Institute of Chemistry, Technology and Metallurgy (Serbia)
Prof. Dr Pasquale D. Cavaliere, University of Salento, Department of Innovation Engineering (Italy)
Prof. Dr Kemal Delijić, University of Montenegro, Faculty of Metallurgy and Technology (Montenegro)
Prof. Dr Nikhil Dhawan, Indian Institute of Technology, Department of Metallurgical and Materials Engineering (India)
Prof. Dr Savas Dilibal, Istanbul Gedik University, Department of Mechatronics Engineering (Turkey)
Prof. Dr Aleksandar Dimitrov, Ss. Cyril and Methodius University in Skopje, Faculty of Technology and Metallurgy (Republic of North Macedonia)
Prof. Dr Natalija Dolić, University of Zagreb, Faculty of Metallurgy (Croatia)
Prof. Dr Yong Du, Central South University Changsha (China)
Prof. Dr Luis Filipe Malheiros, University of Porto, Faculty of Engineering (Portugal)
Prof. Dr Almajda Gigović-Gekić, University of Zenica, Faculty of Engineering and Natural Sciences (Bosnia and Herzegovina)
Prof. Dr Mirko Gojić, University of Zagreb, Faculty of Metallurgy (Croatia)
Prof. Dr Adam Grajcar, Silesian University of Technology, Department of Engineering Materials and Biomaterials (Poland)

PREFACE

On behalf of the Organizing Committee, it is a great honor and pleasure to welcome all esteemed participants of the **56th International October Conference on Mining and Metallurgy (IOC 2025)**, scheduled to take place at **Bor Lake, Serbia**, from **October 22nd to 25th, 2025**.

The collaborative efforts of the University of Belgrade – Technical Faculty in Bor and the Mining and Metallurgy Institute Bor have once again brought together academia, industry, and research institutions to organize this year’s IOC. Our focus remains firmly set on presenting the latest research achievements and technological advancements in geology, mining, metallurgy, materials science, technology, environmental protection, and other engineering disciplines.

This year’s conference program is rich and diverse, featuring **4 plenary lectures, 4 invited lectures, 158 full papers, and 6 abstracts**. The proceedings reflect the contributions of authors from **19 countries**: Austria, Bosnia and Herzegovina, Bulgaria, Canada, China, Croatia, Germany, Hungary, India, Mexico, Montenegro, Poland, Romania, Russia, Serbia, Slovakia, Slovenia, Turkey, and the United Kingdom. Among the submitted papers, eight young researchers under the age of 35 have qualified to participate in the “**MDPI Young Researcher Award**” competition, further emphasizing the conference’s commitment to supporting and recognizing excellence among the new generation of scientists and engineers.

We are also delighted to host the **9th International Student Conference on Technical Sciences (ISC 2025)**, running in parallel with IOC 2025. The student conference brings together young researchers from Serbia and the wider region, with **one plenary** and **50 student papers** presented, offering an invaluable opportunity for the next generation of scientists and engineers to share their ideas and discuss the future of their disciplines with experts. The “**Professor Dragana Živković Best Student Paper Award**” will be presented to the most outstanding student contribution based on originality, research quality, and presentation.

The Organizing Committee expresses its deepest gratitude to all who have supported this event. Our General Sponsor is the Ministry of Science, Technological Development, and Innovation of the Republic of Serbia. We are especially grateful to our Platinum Donors, HBIS Serbia and Serbia Zijin Mining, as well as our Gold Sponsor, DPM Metals Inc., and our Gold Donors, Copper Mill Sevojno and Serbia Zijin Copper Bor. This year, the conference is also supported by the Silver Donor, “MC LABOR” d.o.o. Beograd.

We proudly host a diverse exhibition, featuring Indemak, Labtim SE d.o.o., MERIS d.o.o., Krug International LTD, Altium International d.o.o., Metalurg Foundry Ltd., Fugro Germany Land GmbH, Analysis d.o.o., Lola institut, Tescan and Mikrolux d.o.o., Trokuttst Serbia, Novos d.o.o., Changsha Rui Rui Technology Co., Ltd., MDPI and the Winery of Bukovo Monastery. The official opening of the conference has been supported by Epiroc Srbija a.d.. Finally, we warmly acknowledge our Friends of the Conference: Messer Tehnogas AD Belgrade, the China-Serbia Joint Laboratory on Green Steel Manufacturing, and the Foundation B.Sc. Boško Injac.

We sincerely thank all authors, committees, reviewers, speakers, and chairpersons for their invaluable contributions to shaping IOC 2025. We are confident that the conference will once again serve as a alive platform for scientific exchange, professional networking, and the promotion of sustainable development in mining, metallurgy, and related fields.

On behalf of the 56th IOC Organizing Committee,
Prof. dr Ljubiša Balanović

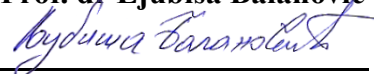

A handwritten signature in blue ink, appearing to read 'Ljubiša Balanović', written over a horizontal line.

TABLE OF CONTENTS

Plenary Lectures

Markus A. Reuter (GERMANY)

Fundamental limits of green metal and mineral processing supply chains within the circular economy 3-5

Miljana Radivojević (UNITED KINGDOM)

Metals and the making of the ancient world: environmental and economic legacies of Eurasian bronze age metallurgy 6-6

Peizhong Feng, Baojing Zhang, Zhi Liu, Shiheng Li, Xiaohong Wang (CHINA)

Recycling and utilization of spent molybdenum disilicide: preparation of coating and metal recovery via synergistic smelting 7-9

Srećko Stopić, Alexander Birich, Bernd Friedrich (GERMANY)

Advances in understanding of reduction processes in extractive metallurgy 10-10

Invited Lectures

Buxin Chen, Mao Chen, Meilong Hu, Kaihui Ma, Hongqing Liu, Chenguang Bai (CHINA)

Development of hydrogen metallurgy in China 13-16

Alejandro Cruz-Ramírez, José Enrique Sanchez-Vite, Teresita del Refugio Jiménez-Romero, Margarita García-Hernández, Heriberto Mendoza-Cárdenas (MEXICO)

Characterization of industrial jarosites from the Mexican zinc extraction process 17-20

Nicanor Cimpoesu, Ionuț Adomniței, Corneliu Munteanu, Mihai Axinte, Marian Luțcanu, Mihai Alin Pop, Marius Teleşcă, Ana Maria Roman (ROMANIA)

Characterization of ceramic coatings with thermal barrier role obtained by atmospheric plasma jet spraying 21-24

Cemalettin Okay Aksoy, Güzin Gülsev Uyar Aksoy, Hasan Berker Sarisan (TURKEY)

Computational fluid dynamics analysis of ventilation strategies for mitigating geothermal gas leakage in subsurface infrastructure projects 25-28

Conference Papers

Geology and Mining

Zoran Marković, Milić Erić, Aleksandar Milićević, Rastko Jovanović, Nikola Živković, Ivan Lazović, Milica Jovčevski (SERBIA)
Optimization of the electrostatic precipitators in unit A1 of the Kostolac a thermal power plant 33-36

Stefano Utili, Dainius Jenkus, Akanksha Mishra, Filippo Bianchi, Riccardo Castellanza (UNITED KINGDOM)
Optimal pitwall design for open pit mines in the presence of faults 37-44

Katarina M. Mihajlović, Jovica Stojanovic, Slavica Mihajlović, Ivana Jelić, Ana S. Radosavljević-Mihajlović, Suzana Erić (SERBIA)
Comparative mineralogical analysis of two zeolitic tuff Slanci and Zlatokop 45-47

Edita Lazarová, Mária Bali Hudáková, Vít'azoslav Krúpa, Alexander Kiovský, Pavol Vavrek, Lucia Ivaničová (SLOVAKIA)
Results from experimental research of rock breaking by small diameter diamond core drill bits 48-51

Edita Lazarová, Vít'azoslav Krúpa, Pavol Vavrek, Mária Bali Hudáková, Lucia Ivaničová, Alexander Kiovský (SLOVAKIA)
Failure criterion of limestone and granodiorite determined by laboratory tests and theoretical processing of drilling process results 52-55

Mária Bali Hudáková, Edita Lazarová, Vít'azoslav Krúpa, Pavol Vavrek, Lucia Ivaničová, Alexander Kiovský (SLOVAKIA)
Optimisation of the rock drilling process conducted with small diameter drilling tools 56-59

Vladan Kašić, Ana Radosavljević-Mihajlović, Jovica Stojanović, Slavica Mihajlović, Nataša Đorđević, Ivana Jelić (SERBIA)
Geological and technological characteristics of the Igroš-Vidojevići zeolite tuff deposits 60-64

Marija Jonović, Dejan Bugarin, Tanja Stanković (SERBIA)
Sensitivity analysis of a copper ore exploitation investment project using COMFAR III software 65-68

Branimir Farkaš, Ana Hrastov, Iva Štefičar (CROATIA)
Factors influencing the occurrence of flyrock phenomena on surface mines-case study 69-72

Petar Radichev (BULGARIA)
Strategic planning, design and mine management under the conditions of the Asarel open pit mine 73-76

<u>Gergana Meracheva, Efrosima Zaneva-Dobranova, Nikolay Hristov</u> (BULGARIA) <i>Geological conditions of natural H₂ exploration on the Balkan peninsula for prosperity mapping</i>	77-80
<u>Güzin Gülsev Uyar Aksoy, Cemalettin Okay Aksoy, Ozan Savaş</u> (TURKEY) <i>Seismic intelligence in surface blasting: seisblast-promax as a next-generation design and optimization tool</i>	81-84
<u>Milenko Jovanović, Daniel Kržanović, Miroslava Maksimović, Vladan Marinković, Stefan Trujić, Miomir Mikić</u> (SERBIA) <i>The importance of geogrids for landfill security and environmental protection</i>	85-89

Abstract

The effect of graphene nanosheets (GNS) on the wettability and microstructure of Sn-0.7Cu-xGNS ($x = 0, 0.02, 0.04, 0.06, 0.08, \text{ and } 0.1 \text{ wt.}\%$) nanocomposite solders was investigated. The composites were produced using the powder metallurgy (PM) technique. The microstructures of the solder joints between the solders and copper substrates were examined using a scanning electron microscope (SEM), and the presence of intermetallic compounds (IMCs) was confirmed by energy-dispersive spectroscopy (EDS). The thickness of the intermetallic layer formed at the solder/Cu interface was reduced by 64.6% with the addition of up to 0.1 wt.% GNS, compared to the Sn-0.7Cu base solder. The wettability of the samples was evaluated by measuring the spreading area of the solders on the copper substrates. The results showed that the addition of up to 0.1 wt.% GNS significantly improved wettability, as evidenced by a 95.2% increase in spreading area compared to the unreinforced solder.

Keywords: (powder metallurgy, nanocomposite, graphene nanosheets, intermetallic compounds)

1. INTRODUCTION

Tin-lead (Sn-Pb) solders have been widely used in the electronics industry due to several advantages, including a low melting point, good wettability, and cost-effectiveness [1]. However, growing environmental and health concerns related to lead toxicity, along with international regulations, have led to a global shift toward the development of lead-free solder materials. As a result, significant research efforts have been focused on identifying suitable alternatives that can match or exceed the performance of traditional Sn-Pb solders [2, 3].

Among lead-free solder systems, Sn-Cu, Sn-Bi, Sn-In, Sn-Sb and Sn-Ag-Cu alloys, particularly Sn-0.7Cu, are considered promising due to their low cost, environmental compatibility, and acceptable mechanical properties [4]. However, they often exhibit poor wettability and the formation of coarse IMCs, which can reduce joint reliability. To improve these properties, recent studies have explored the addition of various types of carbon nanoparticles, such as fullerenes (FNS), graphene nanosheets (GNS), carbon nanotubes (CNT), single-walled carbon nanotubes (SWCNT) and multi-walled carbon nanotubes (MWCNT). Among these, GNS has garnered significant attention due to its exceptional properties, including high thermal and electrical conductivity, mechanical strength and large surface area [5, 6]. GNS exhibits poor dispersibility in metal matrices due to strong Van der Waals forces, which lead to low wettability and particle agglomeration [7]. To overcome these limitations, the mechanical alloying (MA) process is commonly employed to enhance the interaction between graphene and the metal matrix. This

method involves cold welding, fracturing, and rewelding of powder particles in a high-energy ball mill. However, the effect of GNS addition on the Sn-0.7Cu solder system has not been thoroughly investigated. According to the available literature, only Yang and his associates have studied the effect of varying GNS contents (0.02, 0.05, 0.075, and 0.10 wt.%) on the properties of the Sn-0.7Cu base alloy. Their findings indicated improvements in wettability, microhardness and microstructural refinement of the solders [8, 9].

In this study, the wettability and microstructure of the solder joints formed between Sn-0.7Cu-xGNS solders and the copper substrates were investigated. The graphene-reinforced composite solders were synthesized using the PM technique, which included MA, cold pressing and sintering.

2. EXPERIMENTAL

Materials used in this work were powders of tin (Sn), copper (Cu) and GNS. First, Sn and Cu powders (particle size up to 75 μm) were mixed in a specific ratio using a "Turbula T2F" three-axis mixer at 50 rpm for 30 hours to form the Sn-0.7Cu base alloy. The mixture was then MA with GNS (with an average diameter of 5-10 μm and a thickness of 3-5 nm) in a high-energy planetary ball mill "FRITSCH Planetary Ball Mill P-7" at 100 rpm for 3 hours. After MA, the obtained powders were compacted under 300 MPa using a hydraulic press to form green compacts with a diameter of 12.7 mm. Finally, the green compacts were sintered in an argon atmosphere at 185 $^{\circ}\text{C}$ for 3 hours. As a result, the Sn-0.7Cu-xGNS nanocomposite materials ($x = 0, 0.02, 0.04, 0.06, 0.08,$ and 0.1 wt.% GNS) were obtained.

The wettability of the composite solders was determined by measuring the spreading area of the solders on copper substrates. Cylindrical sintered samples (3 mm in diameter and height) were placed at the center of the copper substrates (20 \times 20 \times 1 mm). To prevent oxidation during soldering, RMA223 flux was applied. The soldering process was performed on a hot plate at 250 $^{\circ}\text{C}$ for 1 minute in air. After soldering, the spreading areas were measured using ImageJ software. Subsequently, the microstructures of the solder joints at the solder/Cu interface were examined using a scanning electron microscope (SEM), and the presence of IMC was identified through energy-dispersive spectroscopy (EDS). The microstructural analysis was performed on standard metallographically prepared samples using a "Tescan Vega 3 LMU" SEM equipped with an "Oxford Instruments X-act" EDS detector.

3. RESULTS AND DISCUSSION

Figure 1 shows the spreading behavior of Sn-0.7Cu-xGNS solders on Cu substrates after soldering, while Figure 2 presents the changes in the spreading area as a function of GNS content in the composite solders.

Figure 1. Spreading of solders on the Cu substrates: (a) Sn-0.7Cu; (b) Sn-0.7Cu-0.02GNS; (c) Sn-0.7Cu-0.04GNS; (d) Sn-0.7Cu-0.06GNS; (e) Sn-0.7Cu-0.08GNS; (f) Sn-0.7Cu-0.10GNS

Figure 2. Changes in the spreading area as a function of GNS content in Sn-0.7Cu-xGNS solders

The results presented in Figures 1 and 2 demonstrate that the addition of GNS increases the spreading area of the composite solders, indicating improved wettability. The base Sn-0.7Cu solder exhibited a spreading area of 31.47 mm², while the composite solder with a GNS content of 0.10 wt.% has a spreading area of 61.46 mm², which is approximately 95.3% higher than the base solder. This improvement can be attributed to the reduction in surface tension between the solder and Cu substrate due to the presence of GNS, as well as enhanced oxide layer removal due to the action of the flux. These results suggest that the addition of GNS leads to the formation of a wider and more stable bond between the solder and the substrate, enhancing the mechanical reliability of the solder joint.

Following the wettability test, the microstructure of the intermetallic layer at the solder/Cu interface was examined. Figure 3 presents the corresponding SEM images obtained after the soldering process.

Figure 3. SEM micrographs of the intermetallic layer between Sn-0.7Cu-xGNS solders and Cu substrates (a) Sn-0.7Cu; (b) Sn-0.7Cu-0.02GNS; (c) Sn-0.7Cu-0.04GNS; (d) Sn-0.7Cu-0.06GNS; (e) Sn-0.7Cu-0.08GNS; (f) Sn-0.7Cu-0.10GNS

As observed, a typical wave - serrated Cu₆Sn₅ intermetallic layer was formed at the solder/Cu interface. ImageJ software was used to measure the thickness of the intermetallic layer. The analysis showed that the thickness decreased by 64.62% with an increase in GNS content up to 0.1 wt.%. The presence of GNS in the solder leads to a reduction in the thickness of the IMC layer due to several factors. The high specific surface area of GNS inhibits the diffusion of metal atoms by acting as a barrier to the diffusion of Sn and Cu atoms. Additionally, due to their low density and tendency to agglomerate, GNS accumulate at the solder/substrate interface, further limiting the diffusion of Cu atoms from the substrate. As a result, the reduced diffusion of Cu slows down the formation and growth of the IMC layer at the solder/substrate interface. This is consistent with the results that have been reported in the literature [10, 11]. The presence of the Cu₆Sn₅ intermetallic phase (spectrum 1-3) was confirmed by EDS analysis, as shown in Figure 4. Furthermore, the detection of carbon at the solder/substrate interface (spectrum 4 and 5) suggests that GNS serves as a diffusion barrier for Cu and Sn atoms, leading to the formation of a thinner intermetallic layer.

Spectrum	C (wt.%)	Cu (wt.%)	Sn (wt.%)
Spectrum 1	/	35.28	64.72
Spectrum 2	/	40.57	59.43
Spectrum 3	/	43.48	56.52
Spectrum 4	82.32	12.17	5.51
Spectrum 5	87.15	7.14	5.71

4. CONCLUSION

In this study, Sn-0.7Cu-xGNS ($x = 0, 0.02, 0.04, 0.06, 0.08,$ and 0.1 wt.%) nanocomposite solders were successfully synthesized using the powder metallurgy technique. The experimental results show that increasing the GNS content up to 0.1 wt.% improves wettability and significantly reduces the thickness of the Cu_6Sn_5 intermetallic layer formed at the solder/substrate interface. These improvements promote the formation of a wider and more stable solder joint, leading to enhanced mechanical reliability of the connection.
