PREFACE

On behalf of the Organizing Committee, it is a great honor and pleasure to welcome all esteemed participants of the 54th International October Conference on Mining and Metallurgy (IOC 2023), scheduled to take place at the picturesque Bor Lake, Serbia, from October 18th to 21st 2023.

The collaborative efforts of the University of Belgrade, the Technical Faculty in Bor, and the Mining and Metallurgy Institute Bor have meticulously organized this year's IOC. Our focus remains unwavering on showcasing the latest research findings and advancements in geology, mining, metallurgy, materials science, technology, environmental protection, and other engineering disciplines. Our primary objective is to foster a dynamic environment where academics, researchers, and industry professionals can come together to share their knowledge, experiences, and innovative ideas while exploring opportunities for collaborative research endeavors.

Our conference agenda is rich and diverse, encompassing plenary sessions, engaging invited lectures, technical presentations, enlightening oral and poster sessions, informative technical tours, a diverse exhibition, and memorable social gatherings. At the heart of this event lies our strong commitment to sustainable development within the mining and metallurgy sector. We are dedicated to exploring ecologically conscious methodologies, responsible resource extraction practices, and cutting-edge technologies that reduce the industry's environmental impact and enhance the well-being of local communities.

The conference proceedings comprise 129 papers authored by individuals from universities, research institutes, and industries in 22 countries. We are proud to welcome participants from Bosnia and Herzegovina, Bulgaria, Canada, China, Croatia, Germany, Greece, India, Iran, Kazakhstan, Libya, North Macedonia, Montenegro, Morocco, Romania, Russia, Slovakia, South Africa, Spain, Turkey, United States, and, of course, Serbia.

We are excited to host the 8th International Student Conference on Technical Sciences (ISC 2023) as part of IOC 2023. This event offers students from Serbia and the wider region a unique chance to showcase their research and discuss the future of their fields with experts.

We sincerely thank the Ministry of Science, Technological Development, and Innovation of the Republic of Serbia for their generous financial support. In addition, we express our profound gratitude to all our sponsors, exhibitors, and friends of the Conference for their contributions and unwavering support for playing a pivotal role in ensuring the success of IOC 2023.

We would like to express our heartfelt thanks to all authors, committees, reviewers, speakers, and chairpersons for their invaluable contributions in shaping IOC 2023.

We look forward to welcoming you to the 55th International October Conference on Mining and Metallurgy (IOC 2024), which will be held in October 2024.

On behalf of the 54th IOC Organizing Committee,

Prof. dr Ljubiša Balanović

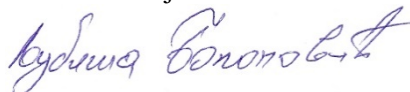

TABLE OF CONTENTS

Plenary Lectures

Velimir R. Radmilović (SERBIA)

Energy: One of the biggest challenges in 21st century 3-3

Jing Yu, Mingshui Luo, Junyi Xiang, Yang You, Zhixiong You, Xuewei Ly (CHINA)

Efficient extraction of vanadium from vanadium slag 4-8

Invited Lectures

Batrić Pešić (UNITED STATES)

The ongoing restructuring of universities to adopt the sophistication offered by internet 11-19

Yaima Filiberto, Alberto Montenegro, Eugenio Alvarez (SPAIN)

Machine learning applied to improving the scrap recycling and melting process in all types of ferrous alloys and steel 20-22

Slobodan Kostić, Qi Fenglai, Savo Pirgić, Nenad Botić, Dobrica Milovanović, Čedomir Sušić, Igor Zlatković (SERBIA)

Construction of a new sintering plant 180 m² within the HBIS Group Serbia Iron & Steel 23-26

Satyananda Patra (INDIA)

Acid activation of bentonite: Physico-Chemical characterization and application in goethitic iron ore green pelletization 27-35

Ridvan Yamanoglu (TURKEY)

Production of metal-based powders by atomization techniques 36-45

Yong Du, Rainer Schmid-Fetzer, Jincheng Wang, Shuhong Liu, Jianchuan Wang, Qiang Lu, Yuhui Zhang, Kai Li (CHINA, GERMANY)

Computational design of engineering materials: case studies for a cemented carbide and a heat resistant Al alloy 46-46

Conference Papers

Ordinartsev Denis, Nadezhda Pechischeva, Svetlana Estemirova, Andrey Rempel (RUSSIA)

Cr(VI) photosorption on composite sorbent of montmorillonite with amorphous TiO₂ 49-52

Mikhail Korovkin, Ludmila Ananyeva, Andrey Zherlitsyn, Sergey Kondratyev, Olesya Savinova (RUSSIA)

Electro-pulse crushing in high-purity quartz production 53-55

Žarko Radović, Nebojša Tadić (MONTENEGRO)

Analytical simulation of EAF dust enrichment 56-59

<u>Nebojša Tadić, Žarko Radović</u> (MONTENEGRO) <i>Thermal and mechanical relaxation of residual stresses in cold rolled aluminium alloy strips</i>	60-63
Dragan Šabaz, Miloš Stojanović, Dejan Petrović (SERBIA) <i>Selection of anchor type using AHP method</i>	64-67
<u>Miloš Stojanović, Veljko Lapčević, Ivica Vojinović</u> (SERBIA) <i>Blast fragmentation analysis in Jama Bor by using WipFrag software</i>	68-71
<u>Veljko Lapčević, Toma Jovičić, Slavko Torbica</u> (SERBIA) <i>Mine ventilation model validation by PQ survey</i>	72-75
<u>Jelena Đorđević, Jelena Stefanović, Sandra Guševac, Ivan Jelić, Stefan Trujić</u> (SERBIA) <i>Life cycle analysis (LCA) of asphalt layers containing recycled asphalt pavement</i>	76-79
<u>Jelena Ivaz, Dejan Petrović, Predrag Stolić, Mladen Radovanović, Dragan Zlatanović, Saša Stojadinović, Pavle Stojković</u> (SERBIA) <i>Occupational injuries in underground coal mining: statistical analysis of data</i>	80-83
<u>Jelena Ivaz, Dejan Petrović, Mladen Radovanović, Dragan Zlatanović, Saša Stojadinović, Pavle Stojković</u> (SERBIA) <i>Prediction of methane emissions in coalmine - Soko</i>	84-87
<u>C. Prochaska, E. Kokkinos, D. Merachtsaki, A. Lampou, E. Peleka, K. Simeonidis, G. Vourlias, A. Zouboulis</u> (GREECE) <i>Recovery of metallic fractions from medical products labelled for single use</i>	88-91
<u>Nataša Sarap, Marija Janković, Vojislav Stanić, Ivana Jelić, Marija Šljivić-Ivanović</u> (SERBIA) <i>Analysis of gross alpha and gross beta activity in samples around former uranium mine Gabrovnica</i>	92-95
<u>Dragan Manasijević, Ljubiša Balanović, Ivana Marković, Uroš Stamenković</u> (SERBIA) <i>Latent heat of some aluminium based phase change alloys for thermal energy storage</i>	96-99
<u>Anđelka Stojanović, Ivica Nikolić, Isidora Milošević</u> (SERBIA) <i>Position of European countries in sustainable resource management</i>	100-103
<u>Aleksandar Đorđević, Duško Minić, Milena Zečević, Dragan Manasijević</u> (SERBIA) <i>Mechanical and electrical properties of the ternary Ag-Ge-Sn alloys</i>	104-107
<u>Milena Zečević, Duško Minić, Aleksandar Đorđević, Dragan Manasijević</u> (SERBIA) <i>Effect of chemical composition on the corrosion resistance of the ternary Ag-Ge-Sn alloys</i>	108-111
<u>Tatiana Aleksandrova, Nadezhda Nikolaeva</u> (RUSSIA) <i>Extraction of low-dimensional structures of nonferrous and noble metals from refractory raw materials</i>	112-115
<u>Viša Tasić, Tatjana Apostolovski-Trujić, Bojan Radović, Nevena Ristić, Tamara Urošević, Vladan Kamenović, Zvonko Damjanović</u> (SERBIA) <i>Air quality measurements in the Bor city during the reconstruction of the copper smelter Bor in 2022</i>	116-119

<u>Slavica Miletić, Biserka Trumić, Suzana Stanković</u> (SERBIA) <i>Application of control charts in the laboratory for testing the metallic materials</i>	120-123
<u>Alexey M. Amdur, Sergei A. Fedorov, Andrey A. Forshev, Nikolay V. Grevtsev, Vera V. Yurak</u> (RUSSIA) <i>Technological aspects of the use of peat as a component of pulverated coal fuel for blast furnaces</i>	124-127
<u>Ljiljana Avramović, Zoran Stevanović, Vanja Trifunović, Radmila Marković, Dragana Božić, Daniela Urošević, Silvana Dimitrijević</u> (SERBIA) <i>Hydrometallurgical treatment of mining waste from Bor - Serbia in aim of copper recovery</i>	128-131
<u>Daniel Kržanović, Radmilo Rajković, Ivana Jovanović, Milenko Jovanović, Miomir Mikić</u> (SERBIA) <i>Determination the final contour of the open pit Veliki Krivelj for the mining capacity 23.1 million tons of ore</i>	132-135
<u>Vladan Marinković, Miroslava Maksimović, Milenko Jovanović, Goran Pačkovski</u> (SERBIA) <i>The use of unmanned aerial vehicles for making the precise 3D topo models and orthophoto images</i>	136-140
<u>Dejan Tanikić, Anđela Stojić, Jelena Đoković, Miloš Stoljiljković</u> (SERBIA) <i>Mechanical characteristics of the shape memory alloy Cu-Zn-Al</i>	141-144

Abstract

*In this paper selected system is Ag-Ge-Sn. This system was previously studied by our group. In this paper results are focused on corrosion resistance. Experimental part includes results of the corrosion resistance of the binary alloys Ge₅₀Sn₅₀, Ag₅₀Sn₅₀, Ag₅₀Ge₅₀ and ternary (Ag-Ge-Sn) alloys in 3% NaCl, of the selected ternary Ag-Ge-Sn alloys. The corrosion resistance of these alloys was examined in 3% NaCl solution using the potentiodynamically polarization method (Tafel plots) and electrochemical impedance spectroscopy (EIS). Tafel plots were fitted using the DC Corrosion Technique software. The results of electrochemical impedance spectroscopy (EIS) were fitted using the Gamry Echem Analyst program and the corresponding equivalent circuit. The value of the exponent *n* was used to determine the degree that controls the rate of the electrochemical reaction. It was investigated how the chemical composition affects corrosion.*

Keywords: Metals and alloys, Ag-Ge-Sn system, corrosion resistance

1. INTRODUCTION

Knowledge of corrosion properties of ternary systems based on Ag, Ge and Sn are of great importance due to different applications in the field of energy and electronics and further practical use [1]. Also, Ge-based alloys are necessary for the development of memory materials [2], for the production of optical discs, DVDs, Blue-Ray discs, flash memory, etc. The corrosion resistance of these alloys was examined in 3% NaCl solution using the potentiodynamically polarization method (Tafel plots) and electrochemical impedance spectroscopy (EIS). Tafel plots were fitted using the DC Corrosion Technique software. This paper presents representative results of performed electrochemical measurements. The results of electrochemical corrosion parameters provide the possibility of a clearer understanding of the potential application of the tested alloys. They provide better understanding of practical application of the tested alloys of the ternary Ag-Ge-Sn system.

2. EXPERIMENTAL PROCEDURE

All tested samples were prepared from high purity elements: silver, germanium and tin. Samples were melted in an induction furnace under high-purity argon atmosphere and slowly cooled to the room temperature. Total mass of sample were 7 g and the dimension were (15x15x1) mm for corrosion resistance. Such prepared samples are subjected to experimental tests.

Three binary Ge₅₀Sn₅₀, Ag₅₀Sn₅₀, Ag₅₀Ge₅₀ and six ternary Ag₄₅Ge₁₀Sn₄₅, Ag₃₀Ge₄₀Sn₃₀, Ag₆₅Ge_{17.5}Sn_{17.5}, Ag₈₀Ge₁₀Sn₁₀, Ag₂₅Ge₂₅Sn₅₀, Ag₁₅Ge₁₅Sn₇₀ alloys were selected for measurement of corrosion resistance. The corrosion resistance of these materials was examined in 3% NaCl solution using the potentiodynamic polarization method and electrochemical impedance spectroscopy (EIS). Tafel polarizing plots were fitted using the DC Corrosion Technique software. The results of electrochemical impedance spectroscopy (EIS) were fitted using the Gamry Echem Analyst program and the appropriate equivalent circuit.

Electrochemical tests of the corrosion resistance of the alloys in 3% NaCl solution were conducted using potentiodynamic polarization measurements (Tafel diagrams) and measurements of

electrochemical impedance spectroscopy (Nyquist diagrams), on a potentiostat/gavanostat /ZRA Gamry Series GTM 750 with an appropriate software.

Electrochemical methods for corrosion resistance testing are described in detail in the relevant literature [3,4].

3. RESULTS AND DISCUSSIONS

Three binary ($Ge_{50}Sn_{50}$, $Ag_{50}Sn_{50}$, $Ag_{50}Ge_{50}$) and six ternary alloys (sample 1 $Ag_{65}Ge_{17.5}Sn_{17.5}$, sample 2 $Ag_{80}Ge_{10}Sn_{10}$, sample 3 $Ag_{45}Ge_{10}Sn_{45}$, sample 4 $Ag_{30}Ge_{40}Sn_{30}$, sample 5 $Ag_{25}Ge_{25}Sn_{50}$ and sample 6 $Ag_{15}Ge_{15}Sn_{70}$) were selected for the corrosion resistance test. Tafel plots are given in Figures 1 and 2, while the corresponding Nyquist diagrams are given in Figures 3 and 4. Tables 1 and 2 show the obtained electrochemical polarization parameters for corrosion. The results for electrochemical impedance corrosion parameters are shown in Tables 4 and 4.

Figure 1 - Tafel plots for tested binary alloys $Ge_{50}Sn_{50}$, $Ag_{50}Ge_{50}$ and $Ag_{50}Sn_{50}$

Table 1 - Electrochemical polarization parameters of corrosion for tested binary alloys $Ge_{50}Sn_{50}$, $Ag_{50}Ge_{50}$ and $Ag_{50}Sn_{50}$

Alloy	Predicted percent of the phase at 25 °C	$-E_{corr}$ (mV)	j_{corr} ($\mu A/cm^2$)	v_{corr} (mm/year)	β_a (mV/dec)	β_k (mV/dec)
B1, $Ge_{50}Sn_{50}$	50%(Ge)+50%(βSn)	456	16,10	0,54	73,40	105,8
B2, $Ag_{50}Sn_{50}$	33%(βSn)+67%ε	482	2,940	0,098	37,40	57,90
B3, $Ag_{50}Ge_{50}$	50%(Ag)+50%(Ge)	296	1,060	0,035	84,40	114,3

From the presented data (Figure 1 and Table 1) for the tested samples of three binary alloys B1 $Ge_{50}Sn_{50}$, B2 $Ag_{50}Sn_{50}$ and B3 $Ag_{50}Ge_{50}$ it is evident that the corrosion potentials of E_{corr} range from -296 mV for B3 $Ag_{50}Ge_{50}$ to -482 mV for B2 $Ag_{50}Sn_{50}$. The j_{corr} corrosion current densities range from 1,060 $\mu A/cm^2$ for B3 $Ag_{50}Ge_{50}$ to 16.10 $\mu A/cm^2$ for B1 $Ge_{50}Sn_{50}$. The lowest value of corrosion rate $v_{corr}=0.035$ mm/year is for the binary alloy B3 $Ag_{50}Ge_{50}$, which is more corrosion resistant than the binary alloy B1 $Ge_{50}Sn_{50}$ ($v_{corr}=0.54$ mm/year) and the binary alloy B2 $Ag_{50}Sn_{50}$ ($v_{corr}=0.098$ mm/year), which has the highest value of the corrosion rate of the three binary alloys tested.

Figure 2 - Tafel plots for tested ternary alloys Ag-Ge-Sn

Table 2 - Electrochemical polarization parameters of corrosion for tested ternary alloys Ag-Ge-Sn

Alloy	Predicted percent of the phase at 25 °C	-E _{corr} (mV)	j _{corr} (μA/cm ²)	v _{corr} (mm/year)	β _a (mV/dec)	β _k (mV/dec)
1 - Ag ₆₅ Ge _{17,5} Sn _{17,5}	17%(Ge)+53%ε+30%ζ	289	0,94	0,031	32,66	67,76
2 - Ag ₈₀ Ge ₁₀ Sn ₁₀	10%(Ge)+90%ζ	224	2,67	0,089	33,66	68,61
3 - Ag ₄₅ Ge ₁₀ Sn ₄₅	30%(βSn)+10%(Ge)+60%ε	466	3,859	0,129	25,33	67,22
4 - Ag ₃₀ Ge ₄₀ Sn ₃₀	20%(βSn)+40%(Ge)+40%ε	509	0,16	0,005	24,39	49,77
5 - Ag ₂₅ Ge ₂₅ Sn ₅₀	42%(βSn)+25%(Ge)+33%ε	533	0,22	0,007	38,58	53,59
6 - Ag ₁₅ Ge ₁₅ Sn ₇₀	65%(βSn)+15%(Ge)+20%ε	529	0,42	0,013	37,12	51,33

Based on the presented data (Figure 2 and Table 2) of the tested alloys of the ternary Ag-Ge-Sn system, the highest corrosion resistance was shown by sample 4 (Ag₃₀Ge₄₀Sn₃₀), with corrosion potential $E_{corr} = -509 \text{ mV}$, the lowest corrosion density $j_{corr} = 0,16 \text{ } \mu\text{A}/\text{cm}^2$ and the lowest corrosion rate $v_{corr} = 0.005 \text{ mm/year}$. This can be related to high percent of (Ge) phase inside this sample. Compared with other samples percent of (Ge) phase is highest in sample 4 and then decreases. Sample 5 (Ag₂₅Ge₂₅Sn₅₀) also show very high corrosion resistance, where the corrosion current densities are $j_{corr} = 0.22 \text{ } \mu\text{A}/\text{cm}^2$ and corrosion rate $v_{corr} = 0,007 \text{ mm/year}$. Based on the corrosion current density and the calculated depth indicator of corrosion-corrosion rate v_{corr} , all tested alloys are very resistant to corrosion ($v_{corr} = 0.005\text{-}0.129 \text{ mm / year}$) in 3% NaCl solution. The corrosion resistance of the tested alloys decreases in the following order: sample 4 (Ag₃₀Ge₄₀Sn₃₀), 5 (Ag₂₅Ge₂₅Sn₅₀), 6 (Ag₁₅Ge₁₅Sn₇₀) 1 (Ag₆₅Ge_{17,5}Sn_{17,5}), 2 (Ag₈₀Ge₁₀Sn₁₀) and 3 (Ag₄₅Ge₁₀Sn₄₅). Similar trend is relating to reduction of (Ge) phase: 4, 5, 1, 6, 2 and 3.

Nyquist diagrams for three samples of binary alloys and six samples of ternary alloys were recorded by electrochemical impedance spectroscopy (EIS) (Figures 3 and 4). The fitting of the experimental data was done using an equivalent circuit (Figure 5) and the results (electrochemical impedance corrosion parameters) are shown in Tables 3 and 4.

Figure 3 - Nyquist diagrams for tested binary alloys B1-Ge₅₀Sn₅₀, B2-Ag₅₀Sn₅₀ and B3-Ag₅₀Ge₅₀.

Figure 4 - Nyquist diagrams for tested ternary alloys of the Ag-Ge-Sn system.

Table 4. Electrochemical impedance corrosion parameters for tested ternary alloys of the Ag-Ge-Sn sytem.

Alloy	$R_{soln}, (\Omega)$	$R_{cor}, (\Omega)$	$R_{po}, (\Omega)$	$R_{tot}, (\Omega)$	$C_{cor}, (F)$	n	$C_c, (F)$	m	Fitting error
3-Ag ₆₅ Ge _{17,5} Sn _{17,5}	25,42	3263	770,5	4033,5	$2,93 \cdot 10^{-4}$	0,6159	$2,39 \cdot 10^{-5}$	0,7286	$366,8 \cdot 10^{-6}$
4-Ag ₈₀ Ge ₁₀ Sn ₁₀	24,29	1672	25,56	1697,56	$2,51 \cdot 10^{-5}$	0,3477	$2,94 \cdot 10^{-5}$	0,8922	$150,2 \cdot 10^{-6}$
5-Ag ₄₅ Ge ₁₀ Sn ₄₅	32,45	642,7	171,4	814,1	$1,41 \cdot 10^{-5}$	0,4133	$4,55 \cdot 10^{-6}$	0,9635	$1,521 \cdot 10^{-3}$
6-Ag ₃₀ Ge ₄₀ Sn ₃₀	27,53	6567	943	7510	$3,79 \cdot 10^{-6}$	0,8792	$1,13 \cdot 10^{-5}$	0,8765	$2,541 \cdot 10^{-3}$
11-Ag ₂₅ Ge ₂₅ Sn ₅₀	26,88	398,3	4457	4855,3	$1,22 \cdot 10^{-4}$	0,9899	$1,30 \cdot 10^{-6}$	0,8835	$3,269 \cdot 10^{-4}$
12-Ag ₁₅ Ge ₁₅ Sn ₇₀	26,32	3234	1605	4839	$1,54 \cdot 10^{-6}$	0,9613	$2,38 \cdot 10^{-5}$	0,8531	$4,245 \cdot 10^{-3}$

For the analyzed data using the equivalent circuit of Figure 5, a low value of the error estimation of the fitting procedure was obtained (Tables 3 and 4). It can be concluded that the selected equivalent circuit is sufficiently precise to describe the tested alloys.

4. CONCLUSION

The corrosion resistance of six ternary and three binary alloys was examined in 3% NaCl solution using the potentiodynamically polarization method (Tafel plots) and electrochemical impedance spectroscopy (EIS). The highest corrosion resistance is for sample 6 (Ag₃₀Ge₄₀Sn₃₀).
