FOREWORD

The International Scientific and Professional Conference POLITEHNIKA 2023 represents the seventh edition of the POLITEHNIKA scientific and professional events, occurring biannually since its inaugural event in 2011. POLITEHNIKA 2023 upholds a distinguished tradition and commitment to integrating higher education and practical application across a diverse spectrum of disciplines represented by defined thematic scopes.

Organized with the patronage of the Ministry of Education of the Republic of Serbia, the Ministry of Environmental Protection of the Republic of Serbia, the Ministry of European Integration of the Republic of Serbia, the Directorate for Occupational Safety and Health, the Office for Dual Education and National Qualifications Framework, the Conference of Academies of Applied Studies in Serbia, the Chamber of Commerce of Serbia, the Chamber of Commerce of Belgrade, the Institute for Standardization of Serbia, the Association of Belgrade Architects, the City of Požarevac and the Tourist Organization of the City of Požarevac, POLITEHNIKA 2023 stands as a collaborative platform at the intersection of academia, governmental institutions and industry.

This year heralds a notable progression with its international status and the incorporation of 10 conference scopes. Expanding beyond the thematic domains featured in previous events, the Conference now encompasses Environment and Sustainable Development, Occupational Safety and Health and Fire Safety, Smart Management Systems, Graphic Engineering, Design, Traffic Engineering, Biotechnology and Healthcare, Mechanical Engineering, Ecotourism and Rural development, and Mechatronics. By engaging experts, emerging professionals, and practitioners from these domains, the conference unifies fields of study programs of the Academy of Applied Technical Studies Belgrade. The thematic scopes, coupled with the structure of the compiled papers in this Proceedings, exhibit a rich diversity and multidisciplinary approach, fundamentally contributing to a holistic examination and resolution of societal and scientific challenges.

Comprising over 220 peer-reviewed contributions, the Proceedings represent a substantial intellectual asset, aligning with the conference's overarching objective of fostering the exchange of knowledge, research findings, and professional experiences among experts from industry, research institutions, and higher education establishments.

The Proceedings of the International Scientific and Professional Conference POLITEHNIKA 2023 serve as a comprehensive snapshot of the current landscape within the thematic realms of the conference, offering both insights and directives for ongoing scientific and professional development. Moreover, they proffer concrete solutions to practical challenges grounded in contemporary trends and pertinent insights.

The Academy of Applied Technical Studies Belgrade extends its sincere appreciation to all conference supporters whose financial contributions played a pivotal role in its successful realization. Special acknowledgment is reserved for the authors of the papers, whose diligence and eagerness to present their work to a wider audience, alongside the reviewers and members of the International Scientific Committee, Program Committee and Organizational Committee, have collectively contributed to the triumph of the International Scientific and Professional Conference POLITEHNIKA 2023.

Belgrade, December 2023
EDITORS

ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

INVITED PAPERS

Srećko Stopić, PhD, Bernd Friedrich, PhD, Process Metallurgy and Metal Recycling, RWTH Aachen University, Germany

Advances in understanding of a role of unit metallurgical operations for recycling

Svetlana Grujić, PhD, Faculty of Technology and Metallurgy, University of Belgrade
Emerging pollutants in the environment: contamination of the Danube river basin in Serbia

Marija Nikolić, PhD, Faculty of Technology and Metallurgy, University of Belgrade
Biodegradable polyesters – from ecology to medicine

DESIGN

INVITED PAPER

Jelena Ristić Trajković, PhD, Faculty of Architecture, University of Belgrade
Society, Ecology and Design Education: Transformative Learning for Future Sustainable and Healthy Environments

MECHANICAL ENGINEERING

INVITED PAPERS

Tamara Bajc, PhD, Faculty of Mechanical Engineering, University of Belgrade
Energy savings and CO₂ emission reduction potential through the existing building renovation

Marko S. Jarić, PhD, Innovation Centre of Faculty of Mechanical Engineering in Belgrade
Analysis of remediation of horizontal cylindrical tank for oil storage

ECOTURISAM AND RURAL DEVELOPMENT

INVITED LECTURES

Marko Perić, PhD, Faculty of Tourism and Hospitality Management, University of Rijeka, Croatia
Challenges of sustainable tourism: Example of Croatia

Snežana Štetić, PhD, Balkan Network of Tourism Experts, Igor Trišić, PhD, Faculty of Geography, University of Belgrade
Selective forms of tourism and sustainable development of rural tourist destinations

INVITED PAPERS

Radomir Stojanović, PhD, Western Serbia Academy of Applied Studies
Education as a pillar of sustainable agritourism in Serbia

Jelena Premović, PhD, Faculty of Economics, University of Priština & Faculty of Economics and Engineering, University Business Academy in Novi Sad
Cultural heritage as a generator of sustainable development of tourism in local communities in the countries of the Western Balkans

Vladimir Živanović, Nevena Majstorović, Zlatibor Tourism Organization, Zlatibor
Analysis of the real number of tourist overnights based on the estimation of water consumption in Zlatibor

MECHATRONICS

INVITED PAPER

Andrea Matta, PhD, Dept. of Mechanical Engineering, Politecnico di Milano, Italy Mohsen Jafari, PhD, Dept. of Industrial and Systems Engineering, Rutgers University, USA
Towards a theory of digital twins: fundamental definition

TABLE OF CONTENTS

SCOPE 1. ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

Srećko Stopić, Bernd Friedrich <i>Advances in understanding of a role of unit metallurgical operations for recycling</i>	26
Svetlana Grujić <i>Emerging pollutants in the environment: contamination of the Danube river basin in Serbia</i>	32
Marija Nikolić <i>Biodegradable polyesters – from ecology to medicine</i>	38
Alessandro Gasparetto, Stefano Grimaz <i>The ESPerT project: a “polytechnic” strategic plan focused on sustainability</i>	44
Ana Stojković, Miodrag Stanisavljević, Ivan Krstić, Nenad Krstić, Dragan Đorđević <i>Physical-chemical characterization of waste glass of general use</i>	50
Ljiljana Tolić Stojadinović, Svetlana Grujić, Nikolina Antić, Tatjana Đurkić <i>Impact of wastewater antibiotics on river water quality in Belgrade area</i>	54
Nataša Karić, Marija Vukčević, Marina Maletić, Mirjana Ristić, Aleksandra Perić Grujić, Katarina Trivunac <i>Removal of organic and inorganic pollutants from aqueous solutions using starch-diatomaceous earth adsorbent</i>	60
Nataša Karić, Marina Maletić, Sara Živojinović, Marija Vukčević, Milena Milošević, Katarina Trivunac, Aleksandra Perić Grujić <i>Alkali modification of fly ash for adsorption of selected dyes</i>	66
Katarina Popović, Davor Antanasijević, Jelena Antanasijević, Viktor Pocajt <i>Carbon footprint of bio-based and recycled plastic materials</i>	71
Katarina Popović, Davor Antanasijević, Jelena Antanasijević, Viktor Pocajt <i>Application of machine learning for the simulations and modeling in environmental science</i>	77
Jasmina Bašić, Danijela Pecarski, Dragana Dragaš Milovanović, Slavica Krsmanović, Daka Tešić <i>Air quality according PM concentration in the city of Belgrade in September 2023</i>	83
Jelena Vesković, Milica Lučić, Slavica Ražić, Ivana Deršek-Timotić, Andrijana Miletić, Maja Đolić, Antonije Onjia <i>Multivariate analysis of the Morava river plain groundwater</i>	89
Eleonora Gvozdić, Ivana Matić Bujagić, Tatjana Đurkić, Svetlana Grujić <i>Ecological risk assessment of aspartame and neotame in river sediments</i>	95
Mirjana Ocokoljić, Djurdja Petrov <i>Impact of urban heat island on butterfly-bush (<i>buddleja davidii franch.</i>)</i>	100
Mirjana Ocokoljić, Djurdja Petrov, Dragan Vujičić <i>Effects of urbanisation on <i>simphoricarpus orbiculatus moench</i> in the green infrastructure of Belgrade</i>	106
Anja Bubik, Katrin Školnik Škrabe <i>Chemical variability of personal care and cosmetic products</i>	112
Miloš Tošović <i>Technical-technological disasters, risk assessment and environmental security</i>	118

Radule Tošović <i>Economic considerations of the relationship of national income, mineral reserves and environmental accounting</i>	124
Slavica Krsmanović, Danijela Pecarski, Jasmina Bašić <i>Quality of swimming pool water and hygiene</i>	130
Jelena D. Lukić, Latinka J. Slavković-Beškoski, Katarina V. Trivunac, Antonije E. Onjia <i>Analysis of heavy metal(loid)s in coal fly ash leachate by inductively coupled plasma optical emission spectrometry</i>	134
Andrijana Miletić, Antonije Onjia <i>Analysis of carbon monoxide in ambient air using passive sensors</i>	139
Ivana Trajković, Milica Sentić, Slobodan Cvetković, Andrijana Miletić, Antonije Onjia <i>Analysis of BTEX in sediments by purge-and-trap gas chromatography-mass spectrometry</i>	145
Saša Marković, Darja Žarković <i>Economic instruments in the function of environmental protection</i>	150
Jelena Milosavljević, Snežana Šerbula, Tanja Kalinović, Jelena Kalinović, Ana Radojević <i>Overview of air pollution in the city of Bor during the period of 2020–2022</i>	156
Milan Trumić, Vladimir Nikolić, Mirjana Marić, Jelena Janković <i>Mining solid waste around Bor, yesterday, today, tomorrow</i>	162
Danijela M. Jašin, Ljubica Lazić Vulićević, Valentina Mladenović, Aleksandar Rajić <i>The solution for reusing non-recyclable plastic-based materials</i>	167
Filip Živković, Milica Stojković, Maja Đolić, Mirjana Čujić <i>Elemental analysis of rare earth elements in coal fly ash from thermal power plants in the Republic of Serbia</i>	173
Darja Žarković, Saša Marković <i>Sustainable production in cardboard industry</i>	177
Marija Prosheva, Jadranka Blazhevskaja Gilev <i>Sensors for ammonia detection based on carbon nanofiller</i>	182
Marija Prosheva, Jadranka Blazhevskaja Gilev <i>Investigation of the UV stability of lignin/polymer composites</i>	188
Ana Momčilović, Marta Trninić <i>A comprehensive analysis: offshore renewable energy methodologies, benefits, and limitations</i>	193
Danijela Đurić Mijović, Danijela Milanović, Jelena Savić, Miloš Nedeljković, Dušan Randelović <i>Wind comfort design based on building position</i>	199
Zaga Trišović, Tomislav Trišović, Ana Virginia Socalici, Corneliu Banesa Birtok <i>Innovative system for electrochemical active chlorine production in coaxial and cabinet-type reactors</i>	204
Đorđe Karić, Aleksandra Sretenović-Dobrić <i>Analysis of energy-saving measures in residential buildings connected to district heating systems using information technology</i>	209
Bosiljka Srebro, Stefan Milojević, Miljan Adamović <i>Environmental accounting education for sustainable development: a comprehensive overview</i>	214
Vladana Đurđević, Aleksandra Janićijević, Dominik Brkić, Ana Popović, Marina Stamenović, Aleksandra Božić <i>Validation of the ICP-OES method for determining the elemental composition of water</i>	219
Vladana Đurđević, Jelena Pavlović, Bojan Obradović, Ana Popović, Marina Stamenović, Aleksandra Božić <i>Proficiency testing as a tool for quality control of laboratory test results in environmental pollution analysis</i>	225

Radmila Marković, Zoran Stevanović, Zoran Štirbanović, Vojka Gardić, Renata Kovačević, Vesna Marjanović, Jelena Petrović <i>Monitoring of the surface water quality in copper mining and metallurgy operation areas in Bor</i>	231
Biljana Angjusheva, Ildiko Merta, Emilja Fidancevski <i>Sustainable synergy: alkali-activated coal fly ash and CDW in sustainable construction</i>	237
Vaishnavi Inamdar, Ana Popović <i>Global ESG perspectives and the changing world of 2023: a sustainability odyssey</i>	242
Nikola Stojković, Dominik Brkić, Svetlana Čupić, Aleksandra Božić, Sladjana Glišić, Vladana Đurđević <i>Determination of polychlorinated biphenyls in waste oil</i>	247
Dejan Vasić, Vladana Đurđević, Marina Stamenović, Aleksandra Božić, Aleksandra Janićijević, Dominik Brkić <i>Determination of PAHS in medical waste</i>	252
Vesna Alivojvodić, Aleksandra Vučinić <i>EU taxonomy as a framework for a functioning circular economy</i>	256
Milica Marković, Ana Momčilović, Maja Stanković <i>Environmental concerns of lithium battery disposal</i>	261

STUDENTS PAPER

Miloš Kovačević, Nataša Radić <i>Air pollution caused by modern-day armed conflict</i>	266
Danijela Jeremić, Daniela Ristić <i>Influence of “Stubo-Rovni” dam on climate change in the city of Valjevo</i>	272

SCOPE 2. OCCUPATIONAL HEALTH AND SAFETY AND FIRE SAFETY

Marta Trninić <i>Application of 3D random e-glass fiber composites in construction hardhat design</i>	278
Drago Pupavac, Ljudevit Krpan, Josip Knežević <i>Cost-benefit analysis in employee health and safety protection</i>	284
Svetozar Sofijanić, Vladan Pantović, Željko Ognjanović <i>Centralized information system for monitoring workplace injuries</i>	290
Dragan Živanić, Nikola Ilanković <i>Safety concerning cableways</i>	296
Dragan Živanić, Nikola Ilanković <i>Basic safety measures for chain conveyors</i>	302
Nataša Ćirović, Ana Petrović, Marija Burilo <i>Testing of microclimate and physical harms in the sawmills</i>	308
Ana Petrović, Nataša Ćirović <i>Noise level investigation in production process</i>	314
Vesna Marjanović, Jelena Jelisić <i>Comparative analysis of risk assessment in the field of construction</i>	320
Saša Kuzmanović <i>Analysis of assessed professional risks at the workplace of forklift drivers in the Logo company with comparative risk assessment methodologies and reference to the current law</i>	325

Marija Mićanović, Tanja Radović <i>Implementation of strategies for the development of critical thinking in English language teaching among the students of the Occupational safety and health study program at the Academy of applied technical studies Belgrade</i>	331
Tanja Radović, Marija Mićanović <i>Business communication obstacles in English language in occupational health and safety education</i>	335
Radenko Rajić, Ivan Arandjelović, Nikola Tanasić <i>A novel tabular method for estimation of waterflow rate at the hydrant nozzle</i>	338
Goran Đorđević, Martina Petković, Ljubinko Rakonjac, Marko Tomić, Anita Klikovac <i>Selection and use of mechanized equipment for extinguishing forest fires in order to increase efficiency - methodological approach</i>	342
Darko Marković, Nebojša Ćurčić <i>Prevention of occupational risks in transport and installation of concrete prestressed T-girders on project Iverak-Lajkovac</i>	350

STUDENTS PAPER

Milena Andrejević <i>“Near miss” events in the TPS Zemun reconstruction project: a research and analysis</i>	357
Maja Đikić, Novak Milošević <i>Research and analysis of professional stress issues among employees in security roles</i>	363
Lazar Milićević, Novak Milošević <i>The impact analysis of stress accumulated outside the workplace on the occupational safety and health of employees in Institute of Nuclear Sciences „VINČA”</i>	368
Jelena Tintor, Jasmina Rajić, Igor Babić <i>Researching the harmful effects of cooling liquid on employees</i>	374
Jelena Tintor, Jasmina Rajić, Igor Babić <i>Employee safety during plastic deformation metal processing</i>	380
Milica Marković <i>Chemical hazards in horticulture from the aspect of occupational safety and health</i>	385
Marijana Drakulić <i>Potentially explosive atmospheres in flour production</i>	391

SCOPE 3. SMART MANAGEMENT SYSTEMS

Radoslav Raković <i>Information security management standard and personal data protection – practical experiences</i>	398
Miloš Jelić, Ana Aksentijević Jelić <i>Deficiencies and advancement in organizational strategic decision - making</i>	404
Igor Milić <i>Civil protection management model at the local government level</i>	410
Dragan Zlatković, Kostadinka Stojanović, Mirjana Tomić, Nebojša Denić <i>Artificial Intelligence as support for quality 4.0: a review of current applications and future directions</i>	415
Koviljka Banjević, Jovana Femić <i>Adult education in Serbia and countries in the region</i>	421

Dragana Gardašević, Dragana Rošulj, Mina Radišić, Koviljka Banjević <i>Application of the Pareto analysis in quality control</i>	428
Aleksandra Nastasić, Dragana Rošulj, Koviljka Banjević, Aleksandra Pavlović <i>The influence of digital transformation on customer perception</i>	433
Ana Maksimović <i>The effectiveness of environmental social and governance due diligence in driving sustainable outcomes in the outdoor apparel industry</i>	439
Aleksandra Pavlović, Aleksandra Nastasić, Andrea Ivanišević <i>QMS and EMS implementation in Serbian organizations – a driving factor for sustainable development</i>	445
Ana Maksimović <i>Socially responsible chains: investigating the social implications of supply chain due diligence in corporate sustainability</i>	453
Aleksandra Pavlović, Aleksandra Nastasić, Predrag Drobnjak, Ana Langović Milićević, Andrea Ivanišević, Ivana Katić <i>PPP projects and economic growth in Serbia</i>	459
Marija Marčetić, Danijela Misoloska, Bojan Kocić <i>The threats and opportunities in modern forwarding business</i>	467
Jelena Pavlović, Dragica Stanković <i>Contemporary approach to leadership, management, knowledge and innovation</i>	472
Marko Pavlović, Ana Petrović, Đorđe Pavlović <i>Study on the attitudes of electronic banking users in Serbia</i>	477
Jelena Pavlović, Dragica Stanković <i>New technologies, labor market and human resources</i>	484
Zorica Baroš <i>The impact of the kelvin redefinition within the SI System on the improvement of temperature measurement technologies</i>	490
Ana Đokić, Hana Stefanović <i>Analysis and visualisation of COVID 19 data set in Python programming language</i>	496
Sanja Pavlović, Dejan Crnoglavac, Aleksandar Starčević <i>Examining the role of drones as educational tools: an practical teaching example in enhancing learning experiences in STEM education</i>	501
Đorđe Dihovični, Dragan Kreculj, Nada Ratković Kovačević <i>Experiences in teaching and mastering materials in WEB applications in vocational education</i>	507
Marko Pavlović, Ana Petrović, Đorđe Pavlović <i>E-learning: study on students' opinions</i>	513

SCOPE 4. GRAPHIC ENGINEERING

Aleksa Milovanović, Tomáš Babinský, Aleksandar Sedmak, Miloš Milošević <i>Printing parameter impact on PLA material fracture toughness results</i>	520
Bojan Banjanin, Neda Milić Keresteš, Jelena Kerac, Rastko Milošević, Savka Adamović <i>Applications of real-time rendering game engine in education through practices and initiatives</i>	526
Slađana Glišić, Predrag Živković, Aleksandra Jančićjević <i>Examination of the possibility of dyeing printing papers with plant extracts</i>	532

SCOPE 5. DESIGN

Jelena Ristić Trajković <i>Society, Ecology and Design Education: Transformative Learning for Future Sustainable and Healthy Environments</i>	539
Biljana Pejić, Bojana Škorc <i>The effects of style on an aesthetic assessment of design</i>	545
Biljana Pejić, Bojana Škorc <i>Familiarity as aesthetic category in design</i>	551
Dragica Nikodinović <i>Analogous principle as an added value in graphic design in the post-industrial era</i>	557
Dužanka Komnenić <i>Design as a form of communication, deconstructive approach to design</i>	563
Duško Trifunović, Anamarija Vartebedijan <i>Graphic design by Miodrag Vartebedijan Varta, Vatra's graphic mark in Yugoslavian and world design</i>	567
Emmanouil Tzimitzimis, Alexandros Papoutsis, Nikolaos Koumartzis, Konstantinos Tsongas, Dimitrios Tzetzis <i>Utilizing parametric computer-aided design and modal analysis for the redensing of Anglo-Saxon medieval lyres</i>	573
Emmanouil Tzimitzimis, Dimitrios Sagris, Constantinos David, Dimitrios Tzetzis <i>Evaluating the influence of infill pattern and density in fused filament fabrication 3D printing technology through multimedia data analysis business communication</i>	579
Ivana Desnica <i>Leather recycling in the context of Haute Couture</i>	585
Jelena Jocić, Maida Gruden <i>Design and education: traditional and online environment</i>	590
Jelena Zdravković <i>Design fashion and the industry: The context of the emergence of fashion and ready-to-wear clothing production</i>	596

OVERVIEW OF AIR POLLUTION IN THE CITY OF BOR DURING THE PERIOD OF 2020–2022

*Jelena Milosavljević¹, Technical Faculty in Bor, University of Belgrade
Snežana Šerbula², Technical Faculty in Bor, University of Belgrade
Tanja Kalinović³, Technical Faculty in Bor, University of Belgrade
Jelena Kalinović⁴, Technical Faculty in Bor, University of Belgrade
Ana Radojević⁵, Technical Faculty in Bor, University of Belgrade*

Abstract: *The annual levels of SO₂, PM₁₀, as well as As, Pb, Cd and Ni in PM₁₀ were assessed in the City of Bor, as an environmental hotspot, from 2020 to 2022. The given period included the data when copper smelting activities were not performed due to the enlargement of the production capacities. The data were compared to the air quality in the study area before 2020 and to the current air quality status in the Republic of Serbia and Europe. The defined annual limit values were exceeded for SO₂, PM₁₀, and Pb concentrations in PM₁₀, while the annual target values were exceeded for As and Cd content in PM₁₀. Among the measuring sites, the poorest air quality was observed at the site Jugopetrol, located in the prevailing NW wind direction. The standstill in the copper smelting activities was perceived in the reduction of the annual levels of SO₂, As, Pb, Cd and Ni in PM₁₀. Compared to the current data for the Republic of Serbia and Europe, the air quality in the City of Bor was poor.*

Keywords: air pollution, SO₂, PM₁₀, toxic elements, copper smelter

1. INTRODUCTION

Air pollution originates from natural and anthropogenic emission sources, whereby the latter ones are considered dominant in the areas endangered by different industrial activities. Air pollutants such as: sulphur dioxide (SO₂), particulate matter (PM), ozone (O₃), nitrogen dioxide (NO₂), and carbon monoxide (CO) are recognised by the World Health Organization (WHO) as crucial environmental threats to the human health on the global level [1] based on their association with numerous negative health conditions. Both inhalation and dermal contact with SO₂ could lead to respiratory problems, lung damage, skin burn or irritation etc. PM, as a major component of air pollutants, are classified as carcinogenic [2]. PM exposure is associated with increased rate of hospitalization, lung cancer, as well as respiratory and cardiovascular diseases. It should be emphasised that toxic elements present in PM are associated with carcinogenic and non-carcinogenic health risks [3]. Environmental impacts of air pollutants could be observed through the damages of ecosystems, acid rain, soil acidification, ozone depletion, deforestation, climate change etc. [2,4,5].

Mining and metallurgical activities in the City of Bor have contributed to the significant environmental pollution, whereby extreme air pollution was denoted in previous decades [6,7,8,9]. Thus, modernization of the copper production was performed and pyrometallurgical copper production was replaced with the flash smelting technology (FST) with higher productivity and

¹jmilosavljevic@tfbor.bg.ac.rs

³tkalinovic@tfbor.bg.ac.rs

⁴jkalinovic@tfbor.bg.ac.rs

⁵aradojevic@tfbor.bg.ac.rs

smaller negative environmental impact, as the main advantages. However, the data for the period after the FTS implementation indicated that the City of Bor is still a hotspot concerning air pollution with As and SO₂ [10]. Thus, the continuous monitoring of the air pollution in the City of Bor still represents one of the most important issues in terms of protection of human health and the environment.

This paper summarizes the annual concentrations of SO₂, PM₁₀, as well as As, Pb, Cd and Ni in PM₁₀ for the period 2020–2022, aiming at comparing the periods before and after the FST implementation, regarding the current air quality status in the Republic of Serbia and Europe as well. The given 3-year period includes the air pollution data when copper smelting was out of order due to the enlargement of the copper production capacities.

2. METHODOLOGY

Mining in Bor started 120 years ago with the discovery of copper rich ore deposits, which were afterwards exploited and processed. The pyrometallurgical copper production from sulphide ores (chalcopyrite – CuFeS₂, chalcosine – Cu₂S, coveline – CuS and arsenopyrite – FeAsS) was the main pollution source of SO₂ and particulate matter, along with the copper mining activities. The outdated technology was replaced with the FST as an advanced and energy-efficient production method, during 2016 [9,10].

Monitoring of the air pollution levels in the City of Bor is performed by Mining and Metallurgy Institute Bor. In the given period (2020–2022), polluting substances (SO₂, PM₁₀, as well as As, Pb, Cd and Ni in PM₁₀) were measured at seven sites (Table 1) which were part of the local and the national Air Quality Monitoring network. The air pollution levels are given in the annual reports by Mining and Metallurgy Institute Bor [11,12,13].

The analysed period also included the data when the smelting was fully stopped, due to the enlargement of the copper production capacities from April 2022 till the end of the year 2022.

Table 1. Description of the measuring sites for monitoring of the air pollutants in the City of Bor

Source: MMI reports [11,12,13]

Measuring sites	Zone	Coordinates	Location*	Measured parameters
Institute (IN)	Urban–industrial	N 44°3'35'' E 22°6'05''	2 km S	SO ₂
				PM ₁₀
Jugopetrol (JP)	Suburban	N 44°3'15'' E 22°7'46''	3.3 km SE	SO ₂
				PM ₁₀

Brezonik (BR)	Suburban–industrial	N 44°5'53'' E 22°5'30''	3 km NNW	PM ₁₀

*in regard to the copper smelter.

Data visualization was done using the R programming language (v 4.1.0, R Core Team) [14] and the R package ggplot2 [15].

3. ANALYSIS OF AIR POLLUTING SUBSTANCES LEVELS

3.1 The levels of SO₂

The annual levels of SO₂ for the study period are given in Figure 1. Annual SO₂ concentrations have exceeded the defined limit value (LV, 50 µg m⁻³) [16,17] at the sites TF (during 2020 and 2021), TP (2020) and JP (in the period 2020–2022). Considering the 3-year period, it can be seen that SO₂ levels decreased at all the measuring sites, with the highest levels in 2020 and the lowest in 2022. This could be attributed to the fact that smelting activities were not performed since April 2022. Among the measuring sites, the highest levels of SO₂ were observed at the site JP. This site was also characterised by the poorest air quality, regarding SO₂ levels, in the previous years [7,8,9,10]. This can be attributed to the location of this measuring site, which is located in the prevailing NW wind direction.

Although the levels of SO₂ were not as high as in the previous decades [7,8,9,10], in the Serbian Environmental Protection Agency reports [18,19], during 2020 and 2021, the air quality in the study area was of the third category (*i.e.* over-polluted air). The City of Bor was the only agglomeration in this category due to the high SO₂ levels. During 2020 and 2021 the levels of SO₂ were measured in the Republic of Serbia at 44 and 39 stations (excluding stations in Bor), respectively, and the annual limit value was not exceeded at any of these stations [18,19]. The SO₂ annual levels have been decreasing across the European countries from 2009 to 2018, with the highest decrease noted at the stations in suburban, and the lowest at the stations in urban areas [2].

3.2 The levels of PM₁₀

The levels of PM₁₀ were above the defined LV (40 µg m⁻³) [16,17] only at the site JP (2022) (Figure 2). The exceedances of the annual LV were not pronounced as in the period after the implementation of FST [10].

High levels of PM₁₀, along with the levels of SO₂, have contributed to the fact that the air in the City of Bor was overly polluted (III category) during 2021 [19]. During 2020 and 2021, the annual LV was exceeded at 18 and 15 stations, respectively, which makes PM₁₀ the dominant polluting substance in the Republic of Serbia [18]. In Europe, during 2018, PM₁₀ levels above the annual LV were noted at 6% out of more than 3000 stations [2].

Figure 1. SO₂ concentrations at the measuring sites in the City of Bor (horizontal line represents annual limit value – LV)

Figure 2. PM₁₀ concentrations at the measuring sites in the City of Bor (horizontal line represents annual limit value – LV)

3.3 The levels of As, Pb, Cd and Ni in PM₁₀

Arsenic concentrations have exceeded the annual target value (TV, 6 ng m⁻³) [16,20] at all the sites, during the analysed period, except at the site KR (2022) (Figure 3a). Compared to the As levels in 2020, during 2021 and 2022, the concentrations were lower, which could be attributed to the standstill in the copper smelting activities. The annual As concentrations were lower compared to the period

after the implementation of FST (2016–2019) [10]. The measuring site with the highest levels of As was the JP, which is located in the prevailing NW winds [10]. The high levels of this toxic element in PM₁₀ were also noted during 2022, when smelting was not performed, which indicated that As could also have originated from other anthropogenic activities, such as resuspension of dust from the flotation tailings, as well as handling of the copper concentrates during transportation.

In Serbia, As levels on an annual basis were far below the TV during 2020 and 2021 [18,19]. During 2018, As levels above the annual TV were recorded at 6 out of more than 650 stations in Europe [2].

Figure 3. Toxic elements concentrations (a) As, (b) Pb, (c) Cd and (d) Ni in PM₁₀ at the measuring sites in the City of Bor (horizontal line represents annual target value – TV for As, Cd and Ni, and limit value – LV for Pb)

Pb levels were above the defined annual LV (0.5 μg m⁻³) [16,17] at the site JP (2020) (Figure 3b). Compared to the Pb concentrations during 2020, the concentrations of this toxic element were lower during 2021 and the lowest during 2022 when smelting activities were stopped. However, the JP stands out with the highest levels of Pb, due to its location on the prevailing wind directions, resuspension of dust from the flotation tailings, as well as handling of copper concentrates during transportation. The levels of Pb at the site JP frequently exceeded annual LV in the periods before and after implementation of FST [9,10].

In Serbia, during 2020 and 2021, the levels of Pb in PM₁₀ did not exceed the LV, both at the stations where fixed and indicative measurements were done [18,19]. The Pb levels above the annual LV were recorded only at one out of nearly 700 stations across Europe during 2018 [2].

From Figure 3c it can be seen that concentrations of Cd were above the defined TV (5 ng m⁻³) [16,20] at the sites IN (2020), JP (2020 and 2021), TP (2020), and BR (2020). Since 2020, the levels of Cd decreased on an annual basis, with the lowest ones during 2022 when smelting was not performed. The measuring site JP stands out with the highest levels of Cd, due to the dust resuspension from the flotation tailings, as well as copper concentrate handling during transportation. At the site JP the exceedings of the defined TV were observed in the periods before and after the implementation of FST [9,10].

In Serbia, the Cd levels on an annual basis were far below the TV during 2020 and 2021 [18,19]. In Europe, concentrations above the annual TV for Cd were not recorded during 2018 [2].

The Ni levels were below the defined annual TV (20 ng m^{-3}) [16,20] (Figure 3d). Among the measuring sites, the highest levels of Ni were observed at the site JP during 2021 and 2022, and the site BR during 2020. The lowest levels of Ni were noted for all the sites in the period when smelting activities were not performed, which could indicate its dominant anthropogenic origin. The annual levels of Ni did not exceed the defined TV in the period after FST implementation [10].

The levels of Ni on an annual level were below the defined TV during 2020 and 2021 in Serbia [18,19]. The concentrations of Ni were above the annual TV at 3 out of nearly 700 stations in Europe during 2018 [2].

4. CONCLUSION

The aim of this study was to analyse the concentrations of the air pollutants monitored at the measuring sites in the City of Bor, which is recognised as one of the most polluted region in the Republic of Serbia and beyond, due to the copper mining and smelting activities. The annual levels of SO_2 , PM_{10} , as well as As, Pb, Cd and Ni in PM_{10} from 2020 to 2022 were compared to the defined limit and target values, as well as the current air quality in the Republic of Serbia and Europe. The data were also compared to the air quality in the study area before the analysed period. The exceedances of the defined annual LVs were observed for SO_2 , PM_{10} , and Pb concentrations, and the annual TVs for As and Cd. Regarding the measuring sites, the site Jugopetrol located in the prevailing NW wind direction was characterised by the poorest air quality. The standstill in the smelting activities, due to the reconstruction of the copper smelter, was noted for the lower content of SO_2 , As, Pb and Cd during 2022. Considering the air quality in the study area in previous years, the concentrations of the given pollutants were generally lower. However, the air quality in the City of Bor, for the given period, was poor, regarding the air quality in the Republic of Serbia and Europe, as well.

This research was supported by the Ministry of Science, Technological development and Innovation of the Republic of Serbia for financial support, within the funding of the scientific research work at the University of Belgrade, Technical Faculty in Bor, according to the contract with registration number 451-03-47/2023-01/200131. Our thanks also go to English language teacher Mara Z. Manzalovic from the University of Belgrade, Technical Faculty in Bor, for providing language assistance.
